

NG YI XUAN

Software Engineer

ngngyongng@gmail.com | 011-5955 8003 | LinkedIn: Yi Xuan Ng | GitHub: github.com/Shuiweiqop | Teriang, Pahang

OBJECTIVE

Final-year Computer Science student (CGPA 3.51) currently interning as Software Engineer at Godigital (Ean Label Industry). Skilled in software engineering with Laravel, React, MySQL, Docker, Redis, and AI-assisted workflows. Seeking a Software Engineer role; available full-time from September 2026. Brings 1+ year of hands-on development experience through internship and personal projects.

PROFESSIONAL EXPERIENCE

Web Developer Intern | Godigital – Ean Label Industry | Mar 2026 – Present

- Accelerated development using Vibe Coding with GitHub Copilot and Gemini AI, reducing development time by 50%; engineered system prompts and agent.md configurations to guide AI agents in optimizing backend logic and UI generation.
- Utilized Docker and docker-compose to set up consistent local development environments, streamlining the team setup process.
- Implemented Redis caching to reduce database query load and improve data retrieval speed across key application endpoints.
- Resolved historical inventory discrepancies via complex SQL data cleaning, achieving 100% stock accuracy in the Warehouse Management System.
- Modernized legacy interfaces into minimalist dashboards using React and Nuxt.js; built database sync logic between ECAPS and warehouse systems with Laravel and MySQL.

PROJECTS

Web-Based Python Bootcamp for Beginners | Final Year Project | 2025 – 2026

- Built full-stack Learning Management System (LMS) using Laravel, React, MySQL, and Inertia.js with 12 modules: lessons, coding exercises, quizzes, rewards, and adaptive learning paths.
- Designed normalized database schema and 257 application routes across all modules; implemented modular frontend components with clean separation of concerns.

Real-Time Multiplayer Mahjong App | Side Project | github.com/Shuiweiqop/mahjong-app | Live: mahjong-app-self.vercel.app | 2025

- Engineered a real-time multiplayer Mahjong game supporting up to 4 simultaneous players using Socket.io for bidirectional event-driven communication between clients and server.
- Built a decoupled frontend-backend architecture with a JavaScript/HTML5/CSS3 client and a Node.js + Express server, deployed on Vercel.
- Implemented real-time game state synchronization across all connected players, handling turn management, tile distribution, and win condition logic on the server side.

EDUCATION

BSc Computer Science (Hons) – Network Engineering | Universiti Malaysia Sabah | Expected Nov 2026

CGPA: 3.51 | Internship: Mar – Aug 2026 | Available full-time from Sep 2026

Relevant Coursework: Network Programming, Cybersecurity, Web Technology, Cloud Computing, Big Data Analytics, Object-Oriented Programming, System Analysis & Design

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript, TypeScript, React, Nuxt.js, Inertia.js

Backend: PHP, Laravel, Java, C++, REST API

Database: MySQL, SQL, Redis

DevOps: Docker, docker-compose, Git

AI Tools: GitHub Copilot, Gemini AI, Prompt Engineering, Vibe Coding, Agent Configuration

Other Tools: Figma

Languages: Malay (Native), English (Fluent), Mandarin (Fluent)

CERTIFICATIONS

Huawei HCIA – Datacom & Cloud Computing

CCNA: Enterprise Networking, Security & Automation

CCNA: Switching, Routing & Wireless Essentials

CCNA: Introduction to Networks
